

## ABSTRACT OF THE DISCLOSURE

2 An overhead monitor in combination with a DVD player includes a fixed plate  
3 adapted to be mounted in a ceiling of an automobile and provided with a concave area  
4 and a recessed area defined in a bottom face defining the concave area to receive therein  
5 the DVD player and a moving plate pivotally connected to the fixed plate and having the  
6 monitor embedded therein. The DVD player has a cover with a wedge and an extension,  
7 a clamp and a hole with a sensor received therein are defined in a face of the concave  
8 area to respectively correspond to the wedge and the extension, so that only when the  
9 cover securely engages the face of the concave area, can the DVD player be operated  
10 normally.
